****Certification documents support the regional standards that define the proper method of collecting hazardous dusts. UL testing, ATEX and CE labs have conducted complete testing on each Dynabrade Raptor Vac® model, to prove regional conformity. For example, if an operator is collecting 10 pounds (4.5 kg) of dust in a day, he should be using Dynabrade Raptor Vac® model 61461 (electric) or 61463 (pneumatic).**

CFM Air Flow vs. Static Water Lift:
FLOW refers to the finer particles that Dynabrade Abrasive Power Tools create when used. The greater the flow, the more efficiency there is in collecting and carrying small particles to the vacuum.
LIFT refers to the weight of the particle being lifted, and is useful when referencing larger or heavy material (concrete debris for example).
